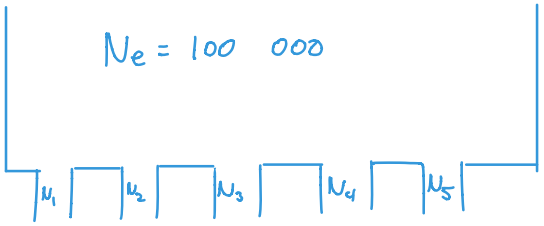
Bison Project Model

$\mu = 2 \times 10^{-8}$ subs/site/gen

$\rho = 1 \times 10^{-9}$ recomb/site



$N_i = \{20, 200\}$

try bottleneck times of $\{10, 50\}$. Times are provided in generations. Warning: ms prime uses years.

Compare 2 measurements

1. Get 2 random chromosomes in N_5 and measure het.
2. Take 1 random chromosome in N_5, 1 in N_i, $i \neq 5$ and measure het.
